The study has a number of limitations. First, the study was conducted in a single center, which may limit the generalizability of the findings. Second, the study was a cross-sectional study, which limits the ability to establish causality. Third, the study did not include a control group, which may limit the ability to attribute the findings to the intervention. Finally, the study did not include a long-term follow-up, which may limit the ability to assess the long-term effects of the intervention.
